National Trust – full wayfinding project at Clumber Park

Finger Post

Caliba's relationship with the National Trust has provided many instances of signage provision over a number of sites. On this occasion the challenge was to provide signage to the huge 3800 acre site which contains the East Midlands Regional Offices & includes free standing finger posts signs; entrance signs & traffic management signs. The National Trust had provided the locations plus the sign design & specification so the project revolved around production & installation within a four week deadline before the centre was formally opened.

Materials ranged from simple painted PVC panels with applied lettering to metal post structures.

The National Trust had been impressed with other local case study sites including Sherwood Forest; Center Parcs & Rufford Abbey; all of which had been recent and ongoing Caliba projects. They were pleased that the project could be completed within budget and on time.

Wall mounted

Freestanding directional

Signs: Interpretation panel & lecterns; Timber poster display units

Description	Specification	Value
Wayfinding scheme & location signage surrounding the whole estate.	Steel posts with galv & external coatings VEKA panels, painted PVC lettering	£24,000
	Installation by 3 teams
